## ENGINEER'S REPORT

### AGNICO MINES LIMITED

#### PROPERTY

Agnico Mines Limited holds several developed and partially developed properties and other groups of claims in the Cobalt, Ontario area.

Producing operations are being conducted principally at the Christopher mine, 3 miles southeast of Cobalt, and the O'Brien mine, 1 mile east of Cobalt. Milling operations are being conducted in a modern mill built in 1957 with a capacity of approximately 300 tons per day. This plant is located on the former Foster property.

#### OPERATIONS

At present, Agnico Mines Limited is treating approximately 6000 tons of ore per month, 3000 tons from the Christopher mine, and 3000 tons from the O'Brien mine. In addition to this, approximately 3000 tons of custom ore are being milled per month.

These operations have been making a small operating profit which, to the present, has been used to carry on exploration work on other property holdings of the Company, principally on claim 407, the west Cart Lake holdings, and the Ibsen-Professor group.

These exploration programmes, particularly on the 407 claim, and the west Cart Lake holdings, have recently met with success which justifies expenditures over the next 9 to 12 months considerably in excess of the expected profits from the normal operation.

#### PROPOSED EXPLORATION AND DEVELOPMENT PROGRAM

##### 407 Property

During the past three months four silver bearing veins have been located on this property by diamond drilling. These are in addition to the fifth or north vein which is already providing some ore for the mill.

Silver intersections in these new veins vary from narrow high grade assaying more than 5,000 ounces per ton over 0.1 foot widths to 30.8 ounces per ton over 14 foot widths. The vein structures appear to have a general east-west strike and appear to be concentrated in the Cobalt Series sediments which have an average thickness of about 100 feet in this area. There appears to be a trough like structure present in the underlying Keewatin here but its detail has not yet been completely defined.

Although probable tonnage and grade of ore in this area cannot be estimated from the work done to date the drilling results are such that it warrants detailed development work.

To develop this area requires deepening the present 407 shaft from the present 300' level to provide new levels at the 360' and 440' horizons. It will require 770' of crosscutting on the 360' level and 1050' on the 440' level to reach the veins. At least 1200' of drifting and 750' of raising will be required to develop these veins.

It is estimated that the above program will require 9 months time to complete and it should be regarded as a minimum one.

#### CART LAKE #2 SHAFT AREA

In this area a recent surface diamond drill hole (No. 4 in the present programme) obtained a significant intersection at the depth of 68 feet in the hole. It consisted of 1½ inches of solid metallic silver with adjacent wallrock carrying visible silver for 2 feet on either side of the vein. A second intersection containing sand and weathered breccia material assayed 70.9 ounces of silver per ton. This leached section matches up with a similar section at 130' in hole No. 3, which assayed 189.8 ounces of silver per ton.

The silver enrichment appears to be concentrated in the Cobalt Series sediments above the Keewatin contact which is dipping down to the east at about 30 degrees.

To develop this area it is proposed to rehabilitate the Cart Lake #2 shaft down to the 98 foot level and do a minimum of 600 feet of drifting and crosscutting and 100 feet of raising.

#### IBSEN-PROFESSOR AREA

Diamond drilling here from the west crosscut heading has intersected several strong calcite veins with the strongest occurring at 638 feet. To date, no appreciable silver assays have been obtained but the vein structure appears similar and probably parallel to the very productive No. 7 vein system.

To determine the merits of this zone it is proposed to do a minimum of 1040 feet of drifting and crosscutting in this area.

#### SURFACE DIAMOND DRILLING EXPLORATION

It is proposed to continue to explore by surface diamond drilling the very large unexplored potential areas held by Agnico Mines Limited.

This program for the next 9 to 12 months includes the following areas:

1. The Nipissing property, east, west, and north of Cart Lake.  
It is proposed to do approximately 6000 feet of surface diamond drilling in the area.
2. The Agaunico Mine property - to explore for veins extending southeast associated with the diabase dyke and beyond that covered by the present underground workings. The surface plant at this property is intact and if the surface drilling meets with success, production could be achieved quickly from this property.  
It is proposed to do approximately 6000 feet of surface diamond drilling here.

#### COBALT LAKE TAILINGS RECLAMATION

There is approximately 1,000,000 tons of tailings from various milling operations in the bed of Cobalt Lake owned by Agnico Mines Limited. Grade of these tailings is estimated to be a little over 4 ounces of silver per ton.

The most recent test work on bulk lots of seven to ten tons of these tailings obtained a recovery of 60% by flotation without regrinding and a concentrate assaying from 350 to 400 ounces of silver per ton was produced by cleaning.

With the price of silver now at \$1.40 Can. per ounce it is recommended that a little further test work be done to determine if regrinding a portion of the tailings would raise the recovery sufficiently to justify the extra cost of grinding.

However, with a 60% recovery by flotation without regrinding and a price of \$1.40 per ounce for silver a good profit is indicated.

The Company has a building available to house the necessary mill equipment.

Cost of test work and equipment necessary to process these tailings at a rate of 1000 tons per day would probably be about \$325,000.

CONCLUSIONS AND RECOMMENDATIONS

The results obtained in recent exploration work justifies the program of development work outlined above.

The program is recommended as a minimum one and as being subject to change and extension depending on results obtained as work progresses.

It is likely that some mining operations can be conducted from the areas during the development period, proceeds from which might help to meet a portion of the cost of the program.

# ENGINEER'S REPORT

REPORT ON

EAGLE GOLD MINES LIMITED

Joutel Township, Quebec

## INTRODUCTION

This report on Eagle Gold Mines Limited outlines briefly the work accomplished to date on the property since the start of road construction in December, 1966. It is recommended that the writer's reports dated January 16, 1967 and June 6, 1967 be read in conjunction with this report.

## ACCESS ROAD

This road, approximately 17,000 feet in length, has been completed to specifications of the Quebec Department of National Resources.

## POWER AND TELEPHONE LINES

Approximately 17,000 feet of first class Hydro line has been installed and is being serviced and operated by Eagle Gold Mines Limited. A telephone line has been installed and five telephones are in use at the property.

## TEMPORARY OFFICE BUILDING

Two small buildings were moved from the old campsite and joined together to form a small office for Timekeeping and Accounting, Engineering and the Mine Manager.

## OVERBURDEN DRILLING

The relative locations of the top of overburden and bedrock were determined by drilling covering an area of 420,000 square feet. Using this data, locations of the shaft collar, hoist base, etc., were chosen.

## SHAFT COLLAR

Seven and one-half feet of overburden was removed. Rock excavation was carried to a depth of 38.0 feet, timber was installed and a reinforced concrete collar was poured.

## HEADFRAME

A three compartment wooden headframe with 2" T & G sheeting was erected and an outside metal cladding applied. The sheave house supporting saddle is of steel construction. Height of headframe from the top of the shaft collar to the center line of the sheaves is 112.0 feet.

Compartments - 2 only 6'0" x 6'0" cage & skipway  
1 only 6'0" x 4'6" manway.

## SHAFT HOUSE

A 55-foot by 55-foot shaft house of the same construction as the headframe has been built.

## BIN HOUSE

A 32-foot by 42-foot bin house of the same construction as the headframe has been built and two steel bins erected in it:

Waste Bin	14' x 21'
Capacity	160 Tons
Ore Bin	21' x 36'
Capacity	620 Tons

## ELECTRICAL SUBSTATION

The electrical substation was completed and Quebec Hydro energized the power line early in the month of June, 1967.

#### SERVICE BUILDING

This is a steel building 30' x 150' divided into six bays each 25' x 30'. It is metal clad inside and out with fibreglass insulation (2") in between. It has concrete floors throughout.

A description of the various bays and the equipment installed in them is as follows:

1. One 8-foot diameter, double drum hoist powered by two 350 H.P., 60 cycle, 3 phase 550 Volt motors.
2. One only 1,000 cfm compressor complete with aftercooler, receiver and 200 H.P. motor.
3. One only 1,500 cfm compressor with receiver and 300 H.P. motor. An aftercooler is on order.
4. This bay houses a small Mine dry equipped with a Bradley Wash Basin, showers, toilets, lockers and hangers. A lower storey under this bay houses the heating boiler.
5. One only bay for electrical panels.
6. One only bay for stores.

#### PUMPING INSTALLATION

This installation consists of a 10' x 10' insulated wood frame building housing two pumps each with a capacity of 60 U.S.G.P.M. at 166' head. The pumps are each powered by 7½ H.P. motors.

A 24-inch suction line projects sixty feet into the river and is protected on the upstream side by an earth levee.

Pipe boxes from the pumphouse to the service building and shafthouse contain two four-inch water supply lines. All pipelines are insulated with wood shavings.

#### TAILINGS DISPOSAL

A right of way twenty feet wide and 2,100 feet long has been cleared to the nearest part of a future tailings disposal area. A circle 4,000 feet in circumference has been cleared-to receive rock to form the base of the dam walls. Waste rock from shaft sinking and development work will be used in this work.

#### MANAGER'S RESIDENCE

One lot was purchased in the Townsite of Joutel and a two storey, seven room house with attached garage was erected for the Mine Manager.

An option has been taken on 16 other lots in the same block as the Manager's residence for future housing construction.

#### TRAILER

One only trailer 12' x 56' complete with 110 - 220 volt electric service and basic furnishings was purchased and at present is the home of the Chief Engineer and his family in Joutel Townsite.

#### SHAFT

Three vertical diamond drill holes were drilled on the shaft site for a total of 1,400 feet to test the rock structure and water conditions.

The 3-compartment shaft is being sunk to a depth of approximately 1,750 feet with stations at 150 foot intervals.

At time of writing, the shaft progress is as follows:

Depth of Shaft Bottom (Shaft Collar = 0')	570 feet
Number of Stations Excavated	"3
Lip Pocket Excavations	3
Cubic feet of Station Excavation	27,676

## CONCLUSION

The writer's report dated January 16, 1967 outlined a proposed programme for this property, the main items of which were:

1. Installation of a mining plant.
2. The sinking of a 3-compartment production-size shaft to a depth of at least 1,700 feet.
3. Full development of the mineralized zone on 3 levels.

Expenditures to September 30, 1967 in connection with the implementation of this phase of the property's development amount to \$1,493,170.79.

It was originally estimated that this phase of the property's development would cost up to \$2,000,000. However, more permanent structures and larger and more equipment have been installed than originally contemplated. This will be greatly to the company's advantage in future operations. The total cost of this phase will exceed \$2,000,000, the final amount being dependent on the amount of pre-production underground work done in excess of the original recommendation before placing the property in production.

For the financial year of the Company ended December 31, 1969 the fee for these services amounted to \$7,200. Mr. Paul Penna is the principal shareholder of Jakmin Investments Limited.

## INTEREST OF MANAGEMENT

Eagle Gold Mines Limited ("Eagle"), a company having a gold mining property in the Joutel area of the Province of Quebec, has recently decided to defer bringing its property into production in view of increased cost estimates and the currently existing market price for gold. Eagle has discontinued construction of its required mining facilities and has negotiated settlement of the amounts due to its suppliers. To fund such settlements and the care and maintenance of its property, Eagle has arranged the debt financing referred to below in the amount of \$800,000 and further equity financing by way of private placement of treasury shares in the additional sum of approximately \$250,000. Eagle intends to effect a shut down of its mine and secure its existing plant and facilities until such time as economic conditions warrant the continuance of its programme to bring the mine into production.

The Company has provided the above mentioned sum of \$800,000 by purchasing securities of Eagle consisting of \$800,000 principal amount of debentures accompanied by warrants to purchase 800,000 shares of Eagle. The total cost of these securities was \$800,000. The debentures have a term of five years, bear interest at a rate of 1½ % above a Canadian chartered bank prime interest rate in effect from time to time and are secured by a first charge of all real and immoveable property of Eagle. The Warrants have a term of five years and are exercisable at \$1. per share for the first three years and at \$1.50 per share for the remaining two years. Warrants to purchase 155,000 of the said 800,000 shares have been issued subject to the authorized capital of Eagle being increased. The Company has agreed at the request of the Canadian Stock Exchange that it will not exercise the Warrants for a period of six months from June 1, 1970.

Pending receipt by Eagle of the proceeds of the above noted equity financing the directors of the Company have authorized an unsecured demand loan by the Company to Eagle in an amount up to \$150,000 at an interest rate of 1% above a Canadian chartered bank prime interest rate in effect from time to time. \$103,000 of such loan has been advanced to Eagle.

Mr. Paul Penna, 50 Godfrey's Lane, Port Credit, Ontario, a director and officer of the company, is a shareholder, director and President of Eagle. Mr. A. Basen, 29 Hilltop Road, Toronto, Ontario, a director of the Company, is a shareholder and director of Eagle. Mrs. Jean Geller, 20 Hilltop Road, Toronto, Ontario, the Secretary-Treasurer of the Company, is also a shareholder, director and Secretary-Treasurer of Eagle. The shareholdings of each of the aforesaid persons in Eagle are nominal.

#### **APPOINTMENT OF AUDITORS**

Action is to be taken at the meeting with respect to the appointment of the firm of Starkman, Kraft, Rothman, Berger & Grill as the auditors of the Company.

#### **GENERAL INFORMATION**

Information contained herein is given as of June 8, 1970. Management knows of no matters to come before the annual meeting of shareholders other than the matters set forth in the enclosed notice of meeting. Receipt at the meeting of the financial statements of the Company as at December 31, 1969 and the report of the auditors thereon will not constitute approval or disapproval of such financial statements and report.
